products, ice-creams, fermented cereal based products, milk based powders, infant formula, pet food or a pharmaceutical composition selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent Bifidobacterium related nucleotide sequences given in the Sequence Listing from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office

                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABGB1842 and ABGB1843, or a sequence exhibiting at least 50% identity or which hybridises with the sequences given in ABGB1843. Also described is a polynucleotide (II) encoding a custom protein, comprising a sequence selected from 1097 sequences given in ABF6528 to ABF66354 ligated in frame to a polynucleotide encoding a cherologous polypeptide. (I) has antidiarrheic and antibacterial crivities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of affidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented
                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium longum

diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO Syndrome (Synoritis, acne, pustulosis, Mypertosis and category obstances and such control of particularly involved in the inflammatory lesions sesociated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a particularly involved in very particular and determining the amount of bound protein in the sample. The plypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies and therefore treat P. acnes proteins. The antibodies may also be used as diagnostic agents for determining P. acnes presence. for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU467985 and AAU67509. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

composition and access protection.

Comparison of P. acnes polympetides. The invention also relates to polympetides encoded by the polympetides. The invention additionally encompasses expression vectors and host cells comprising a comprising a polympetide of the invention; antibodies against polympetides of the invention; tusion proteins comprising a polympetide of the invention; an method for stimulating an immune response specific for a P. acnes to polympetide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polympetides, polympetides, antibodies, fusion proteins, T cell populations, or canigen-presenting cells that express the polympetide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a composition of patient. The P. acnes polympetides, polymucleotides, antibodies, fusion proteins T cell populations or antigen-presenting cells that express the polympetides are useful for adaptabing, preventing or treating acnes polympetides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the sequence represents a P. acnes DNA contis adagnostic assay. The present can the invention. Note: The sequence data for this patent did not form in the invention. Note: The sequence data for this patent did not form disconting and discontine form and the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with the form with 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9538 reaccaccarcccarcccararreaccirccriccarcrecaccriccarccacccrereaccir 9597

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                          The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a acrea or decreases the expression of the polymucleotide sequence that increases or decrease the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polymucleotides for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polympeptides for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polympeptides or their antibodies. The polymucleotide or the compound that compound that modulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more compound that regulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CI) and spared nerve injury (Nunu) in an animal (e.g. spinal error injury (SNI)) in an animal (e.g. spinal error prepared decreased during pain. Note: The sequence data for the patent did not form part of the polympetides of the invention which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the polympetides of the invention in the invention in the form part of the polympetides of the p

The invention relates to isolated Streptococcus pneumoniae nucleic acids and polypeptides. The nucleic acids and proteins are useful for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, such as S. pneumoniae infection. These may also be used for drug screening procedures. The present sequence represents a Streptococcus pneumoniae nucleic acid of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     preventing and treating pathological conditions resulting from bacterial infection, e.g. Streptococcus pneumoniae infection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATTACTGACGACAAAGACCCCGACCGAGATGGTCGGGGGTCTTTTTGTTGTGGTGCTGTGA 91

The invention relates to an isolated mucleic acid comprising a sequence encoding a Streptococcus pneumoniae ADR91366polypeptide, or its cargenoccus pneumoniae ADR91366polypeptide, or its ancoding a Streptococcus pneumoniae ADR91366polypeptide, or its an encoding a Streptococcus pneumoniae ADR91369, ADR95612, ADR95682, ADR96079) or any of the fully defined sequences appearing as ADR91705, ADR96079) or any of the fully defined sequences appearing as ADR91705, ADR991886, ADR92197, ADR92314, ADR93039, ADR992366, ADR992680 or ADR991886, ADR92197, ADR99234, ADR993099, ADR992660 or ADR991886, ADR92197, ADR99234, ADR993099, ADR99266, ADR992660 or ADR993086, ADR992660 or an least 20 or 30 consecutive nucleotides sequences. The nucleic acid cited above operably linked to a transcription regulatory comprising at least 20 consecutive nucleotide are a recombinant expression vector and a probe comprising at least 20 consecutive nucleotide of the present sequences as cited above. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of pathological conditions regulating from bacterial infection by continue nucleic acid sequences. Note: The sequence data for this contitis media. The present sequence is one of the 2603 disclosed S. CC pneumoniae nucleic acid sequences. Note: The sequence data for this patent did not form part of the princed appearance. The sequence data for this capacine of the continue nucleic acid sequences. Note: The sequence data for this capacine of the princed appearance of the princed appearance. The patent of the princed sequence of the continue nucleic acid sequence. The sequence data for this capacine of the princed appearance of the princed appearance. The sequence data for this capacine of the princed appearance of the princed appearance. The sequence data for this capacine and appearance of the princed appearance. The sequence data for this capacine of the princed appearance of the princed appearance. The sequence data for this capacine of t

The inversion relates to an isolated nucleic acid molecule from bacterial preventing or treating pathological conditions resulting from bacterial infection. The isolated nucleic acid comprises: (a) any of the 2603 mucleotide sequences of ARA57818; (b) a nucleotide sequence conditions as treeptococcus pneumoniae polypeptide comprising any of the canceling any of the nucleotide sequence in the sequence of at least 8 nucleotides in length, where the sequence is sequence of at least 8 nucleotides in length, where the sequence is above nucleic acid operably linked to a transcription regulatory element; (c) a call comprising the recombinant expression vector. (d) producing an consisting of at least 8 nucleotides of any of ARA5536 to ARA57839; (s) treating a subject for 8, pneumoniae polypeptide (d) a probe comprising a nucleotides of any of ARA55336 to ARA57839; (s) treating a subject for 8, pneumoniae polypeptide is selected from ARA57839 to ARA6741; (7) a vaccine composition of an S. pneumoniae polypeptide or its cangenent, where the polypeptide is selected from ARA57839 to ARA6741; (7) a vaccine composition for preventing or treating an S. pneumoniae (d) a computer readable medium having recorded the nucleotide sequences of ARA57839; (l) a computer readable medium having recorded the nucleotide sequences of ARA57839; (l) a computer based system for identifying fragments of the Streptococcus genome of commercial importance. The present composition and methods are useful for diagnosing, preventing or treating bacterial infections, particularly S. pneumoniae infection. The present sequence composition and methods are useful for diagnosing, preventing or treating bacterial infections, particularly S. pneumoniae of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      604 ATTACAGATATCAACAAGGCTTACCTAAATCGTGGTGACCTTTCTGTTGAGCTGATGGGG 663

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1292 greaagcricecerricargricargregiegreficacecrecececerergricariere 1233
                                                                                                                                                                                                                                                                                                           The invention describes a non-naturally occurring nucleic acid comprising a nucleotide sequence that encodes a functional ND4 mitochondrial protein and differs from a naturally occurring nucleic acid that encodes a ND4 mitochondrial protein by at least one codon substitution. Also described are: a cell into which has been introduced the non-naturally occurring nucleic acid above; and reducing dysfunction in a cell caused by a mtDNA mutation associated with Laber Hereditary Optic Neuropathy. Specifically claimed is non-naturally occurring ND4 nucleic acid comprising 1377 base pairs (SEQ ID NO. 1), fully defined in the specification. The nucleic acid is useful for reducing cellular dysfunction caused by mitochondrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           57 GAGATGGTCGGGGGTCTTTTGTTGTGTGTGTGACGTGTTGTCCAACCGTATTATTCCG 116
                                                                                                                                                                                                           sequence

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides cancerous) ovarian cancer intibodies that selectively bind to the canceded by the markers, antibodies that selectively bind to the canceded by the markers, antibodies that selectively bind to the polypeptides, amethod of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the amerker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer mapped of expression of the marker cresponds to a secreted protein or to a transcribed of polymucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein or protein and antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the marker or anneals with a portion of the polymucleotide comprising the marker or anneals with the marker or anneals with the marker or anneals with the marker or anneals with a poetion of ovarian cancer in a mapped at a first point in time, repeating the merker of anneals with a patient or anithody of the invention is used to trace ovarian cancer. The sequence represents a human ovarian cancer by marker of the printed specification, but was obtained in electronic format directly of the marker is a sequence represente a human ovarian cancer by marker of the printed specification, but was obtained in electronic for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27 cecretacrecrencerectracerretreriranges arra arcecres es es

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic acid is associated with apoptosis. The sequences can be used in the diagnosis, treatment and prevention of diseases associated with excessive or inadequate apoptosis, including tumours, autoimmune diseases, viral infections, degradative diseases (Alzheimer's, alcohol-induced injury to the liver, for identifying agents for treating these diseases, and to prepare transgenic animals in which expression of an apoptosis related sequence is altered. These are useful for genetic animaly dilatory cardiomyopathy. The present sequence is one of the apoptosis related sequences of the invention

This invention describes novel nucleic acid molecules that are associated with apoptosis and encode a polypeptide and are derived from a normalised gene library (embryonic or liver) or clone collections, and the extent of apoptosis measured by cell death detection assay or the CPRG assay (measuring loss of membrane integrity). The products of the invention have cytostatic, neuroprotective, immunosuppressive, antirheumatic, caracteric, dermatological, antiinflammatory, hepatotropic, virticide, notropic, anticonvulsant, antiantimenatory, hepatotropic, virticide, notropic, anticonvulsant, antiantimenatory, hepatotropic, virticide, notropic, anticonvulsant, antiantimenatory, and can be used for gene therapy. The polymuclectides also related vectors, hosts (or their extracts), encoded polypeptide (or their receptors) and/or agents that inhibit their activity (including antisense sequences) are used for treatment or prevention of tumours, autoimmune or degenerative diseases and viral infections, specifically leukaemia, carcinoma, sarcoma, multiple solerosis, rheumacoid arthritis, diabetes, lupus, or infection parkinson's diseases, reperfusion injury, stroke and alcoholic liver parkinson's diseases, reperfusion injury, stroke and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alcoholic liver and alc

The present invention relates to novel purified proteins (I) and their coding sequences (II) (ADR89477-ADR89550), which are capable of inducing approprials. The proteins (I) are useful as a target in screening for compounds that modulate approsis. Compounds that modulate approsis. Compounds that modulate the expression or activity of the protein may be useful in treating neurodegenerative diseases, ischaemic diseases, cancer, autoimmune diseases, or viral diseases. Measurement of the expression or activity of the protein may also be used to disease or disease or a susceptibility to a disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention relates to nucleic acids from the mouse, where the nucleic acid is associated with apoptosis. The sequences can be used in the diagnosis, treatment and prevention of diseases associated with excessive or inadequate apoptosis, including tumours, autoimmune diseases, viral infections, degradative diseases (Alzheimer's, alcohol-induced injury to the liver, for identifying agents for treating these diseases, and to prepare transgenic animals in which expression an apoptosis related sequence is altered. These are useful for genetic and/or pharmacological investigations of apoptosis and related diseases, including dilatory cardiomyopathy. The present sequence is one of the apoptosis related sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New apoptosis-associated nucleic acid sequences and polypeptides, useful for diagnosis, treatment and prevention of e.g. tumors and neurodegeneration.
                                                                       Alzheimer's disease; Parkinson's disease; Huntington's disease; reperfusion injury; stroke; liver damage; dilatory cardiomyopathy; transgenic animal; hepatotropic; antialcoholism; cytostatic; immunosuppressive; virucide; nootropic; neuroprotective; vasotropic; antiparkinsonian; cerebroprotective; ds.
